PROFESSIONAL SERVICES

DATA MAPPING

Do you truly know where your data is? With most organizations utilizing third-party applications and a combination of on-premises, hybrid, and cloud systems, answering this question can be overwhelming. By interviewing key stakeholders and conducting deep dive analysis, Atomic Data engineers can map out your data ecosystem and identify blind spots for you. It's a unique service designed to help you pinpoint, manage, and protect your data.

Mapping for improved security

Starting with an initial analysis and discovery phase, you will learn about data previously hidden from your view. This becomes documented in a custom-tailored data map which can be used to implement security guardrails and improve your security posture.

Initial analysis and comprehensive discovery

- Stakeholder interviews to determine data flow
- Deep analysis to identify blind spots
- Segmented discovery specific to each department

Expert design and map development

- Updated over time as your organization evolves
- Custom-tailored for your unique needs
- Skillfully designed for practical use

SEVERAL KEY BENEFITS

- ☑ Increased awareness of cybersecurity risk
- ☑ Knowledge of critical data at a glance
- ☑ An effective tool for data management

Purposeful data protection

- Policy and procedure consulting
- Backup as a Service (BaaS) for your data
- 24x7 expert support and monitoring
- Atomic Data Disaster Recovery as a Service (DRaaS)

SAFE. SIMPLE. SMART.
