CLOUD SOLUTIONS & SERVICES

When it comes to cloud, one size does not fit all. Your cloud strategy depends on dozens of factors, each unique to your organization. Atomic Data can support your cloud strategy in a myriad of ways, including tenancy in the Atomic Cloud®.

The Atomic Cloud® is a private, local, software defined hosting environment built on the leading solutions from Dell and VMware by Broadcom. Ideal for those businesses who demand more control and don't want all their eggs in one hyperscaler basket, the Atomic Cloud is your secure, customizable, and cost effective cloud solution for production and development workloads.

Case Study | media loft

Since 2014, experiential agency Media Loft has entrusted Atomic Data with their cloud needs. In doing so, the company has avoided having to maintain their Exchange and Active Directory servers on expensive, on-premises hardware.

"Atomic pays attention to [our] changing needs. [I have] much gratitude for their support."
- Director, IT
