INTERNET SECURITY

MANAGED DDOS MITIGATION

To maintain customer trust and brand reputation, your internet must be resilient and readily available. Multi-vector Distributed Denial of Service (DDoS) attacks now require mitigation in seconds, not minutes. We leverage contemporary DDoS mitigation technologies to safeguard your network in real time — even from the most sophisticated attacks.

PROACTIVE, REAL-TIME DDOS PROTECTION

We'll protect your services against volumetric, sub-saturating, DNS amplification, and state exhaustion DDoS attacks. Our approach prevents internet disruption and downtime, keeps your apps online, and saves you from unexpected revenue loss.

- ✔ **Second to sub-second detection-to-mitigation timelines**
- ✔ **Highly scalable, always on, real-time mitigation**
- ✔ **Non-disruptive protection for IPv4 and IPv6 traffic**
- ✔ **Whitelist and temporary shun list enforcement**
- ✔ **DDoS mitigation at layers 3 through 7**

## Choosing your defense solution with confidence.

Many commercial DDoS mitigation solutions utilize legacy solutions that require manual intervention and minutes to remediate. When choosing a DDoS solution, finding one that protects against sophisticated DDoS attacks, and does so automatically, is essential. Atomic Data Managed DDoS protects against these attacks in seconds, ensuring continued business continuity.

Continuous DDoS monitoring 24x7x365

Time-tested, proven, security solution

Accurate & precise DDoS protection

SAFE. SIMPLE. SMART.
